Computer Science and Engineering

## CERTIFICATE

This is to certify that the Project Report entitled, “**WCE CAMPUS INTERACTION**” submitted by Ms. Apurva Rawal, Ms. Prachi Waware and Ms. Vaishnavi Pise, to Walchand College of Engineering, Sangli, India, is a record of Bonafede Project work of course “4CS441” “*Project-II and Seminar*” carried out by her under my/our supervision and guidance and is worthy of consideration for the award of the degree of Bachelor of Technology in Computer Science & Engineering of the Institute.

**Prof. Dr. M. A. Shah**

Head Of Department

Computer Sci. & Engg. Dept,  
WCE, Sangli

# Acknowledgement

In the accomplishment of completion of my project on WCE campus Interaction. I would like to convey my special gratitude to Mrs. M.A. Shah, of Computer Science and Engineering department and as well as Mr. P.H. Sawant the director of Walchand College of Engineering, Sangli.

Your valuable guidance and suggestions helped me in various phases of the completion of this project. I will always be thankful to you in this regard. I am ensuring that this project was finished by me and not copied. Along with these my fellow group members who put their efforts to make this project happen are also thankful for their contribution. Through, this acknowledgement page I depicts the gratitude, respect and thankfulness of the ours towards the people who helped him in pursuing the project successfully and ensured successful completion and implementation of the project.

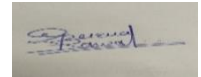

# Declaration

I hereby declare that work presented in this project report titled “**WCE CAMPUS INTERACTION**” submitted by me in the partial fulfillment of the requirement of the award of the degree of **Bachelor of Technology (B. tech)** Submitted in the Department of **Computer Science & Engineering, Walchand College of Engineering, Sangli**, is an authentic record of my project work carried out under the guidance of (Dr. M. A. Shah).

# 1 Project Title

## WCE Campus Interaction

## 2 Abstract

As we know lock down hits every student in their career and had caused many problems while learning. We can have many such solutions too for some problems and on the basis of that we have come up with the solution for interview preparation for specifically of our college.

Campus Interaction System that consists of a student's benefit portal regarding placements and its preparation. The project is beneficial for college students and the college placement officer. The software system allows the students to visit the different company related study and its preparation along with the material resources. The system also consists of an interview experiences of past students and alumni connection for the better communication where various companies visiting the college has its view of interview process in that college. The admin has overall rights over the system and can moderate and delete any details not pertaining to college placement rules. The system handles student as well as company data and efficiently displays (Analytical)all this data to respective sides.

### 3 Introduction and Literature survey

As per suggested problem statement there are various possible ideas to provide the solutions for portal. Through which have selected the few basic requirements and tried to fulfill it. For the completion of this project first of all gone through the process of recruitment of Walchand college and tried to understand the flow.

The literature for this project may, be used is Walchand College's detailed website and manual data from college as most of the data will be collected through college placement training officer. Also, for the references have checked for other websites of different colleges.

As have gone through the process, approached to our training and placement officer professor "Mr. Dhaigude Sir" for the whole understanding. After the requirement analysis the collection of the past data and the future demand or requirements for the same on which we were going to build our portal.

The background knowledge which requires is provided by college staff and students. The technology suggestions and selections are done for the long-term use by considering the tolerance of website and hence will be easy for updating the portal.

The work contribution is given above and the time duration required is 3 months from the start of the information collection. The future extensions are available and mentioned in future scope in the report.

### 4 Problem statement

**WCE campus interaction:** As the COVID pandemic has hit all of us with health issues it has also affected the college campus process very much. Students from Engineering have to face the problems in the entire recruitment process. Proper guidance and the material for preparation is sometimes inefficient for some students. Also, the popper guidance from the past Alumni from the companies is very valuable before appearing for actual interviews. Sometimes it is very tough for some students to ask for help. At that time a centralized system providing all facilities will be beneficial for students. Our system provides the solution for the above problem with multipurpose services in the whole campus preparation process.

## 5 Methodology:

### **Proposed Method/ Algorithm:**

Our system consists of full stack Web application for the desktop

- ❖ Frontend- UI for the system
- ❖ Backend- server management and load balancing
- ❖ Database- mongo DB for storing students and form's data

The Process is having following sub part:

- Login Credentials for each student and alumni
- Company wise past data
- Last 5 years interview experience by WCE alumni
- Connection with Alumni
- Placement history and data in the form of charts and pie charts.
- FAQ for students
- Practice and technical section-
  - Mock interview preparation
  - DSA preparation

## 6 Result and Discussion:

- ❖ The system will provide the past placement records to view in pie charts, bar graphs and download in the pdf format.
- ❖ Maximum work goes manually in the present placement system which makes it take time to avail changes. This includes main problems like searching for the data of students and sorting them along with it.
- ❖ The user can also add his or her placed company experience, interview process and preparation tips with simple UI.
- ❖ Admin can be able to add any event in the calendar by simply filling some information in the UI form and that will be displaced to user.
- ❖ Also, updating student data is a cumbersome job and does not have a method to notify the student in time which makes the management of placements very difficult. In the proposed system, all of these problems become automated.
- ❖ The proposed system is helpful for all students in technical as well as non-technical point of view. Non-CSE and IT students have a good scope to prepare for IT companies through this system and find their paths.

## DATA STRUCTURES AND ALGORITHMS

Data structures and Algorithms are very much essential and hot topics for product based companies These are mostly focused by each company and has various difficulty levels accordingly Question-pine is The Website specially made for solving the DSA problems. These Questions are selected by the experienced alumina's of our College. The special Chatting features are also introduced for connecting people.

## 7 Project Artifacts (SRS, Test Cases, UML diagrams, Source code, Setup etc.) on GitHub repository (access to project guide only)

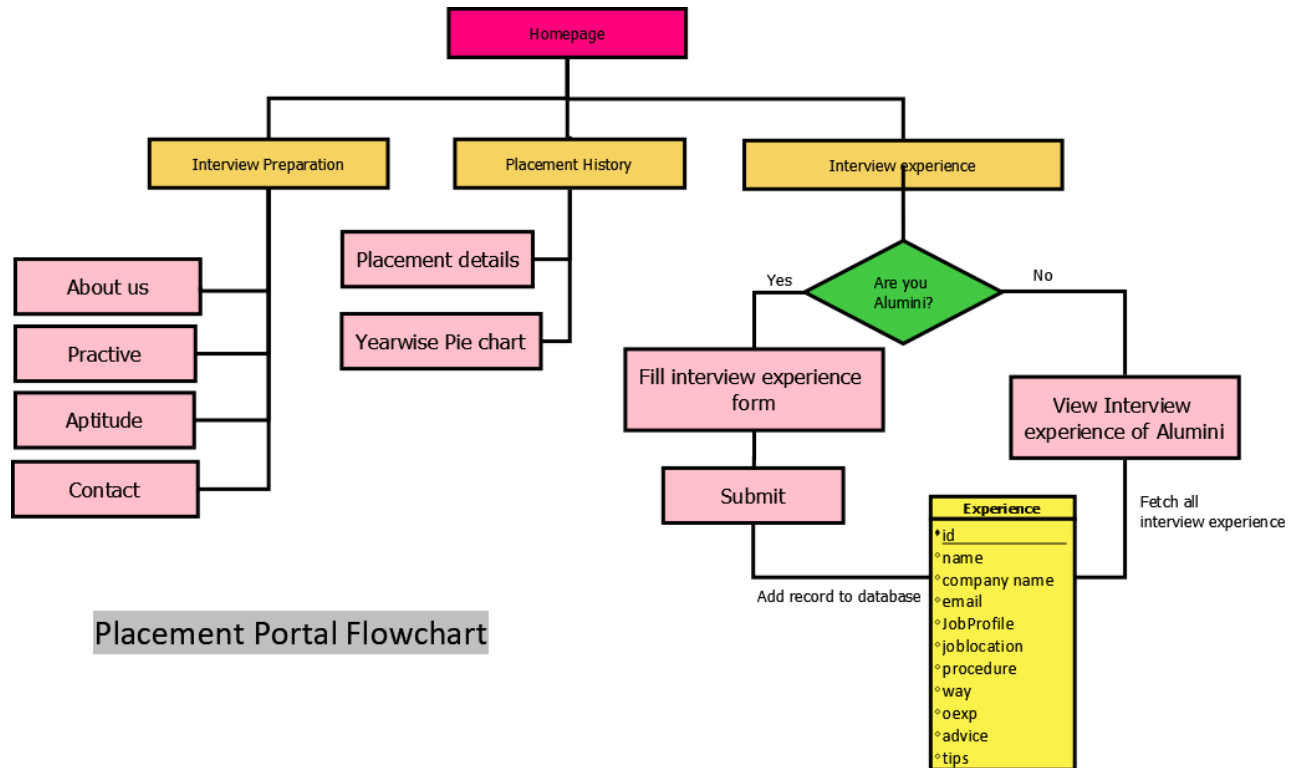

Figure 1: System Architecture (placement portal)

GitHub-Repository:<https://github.com/Apurva0707/WCE-campus-interaction/>

## Outcomes/Applications

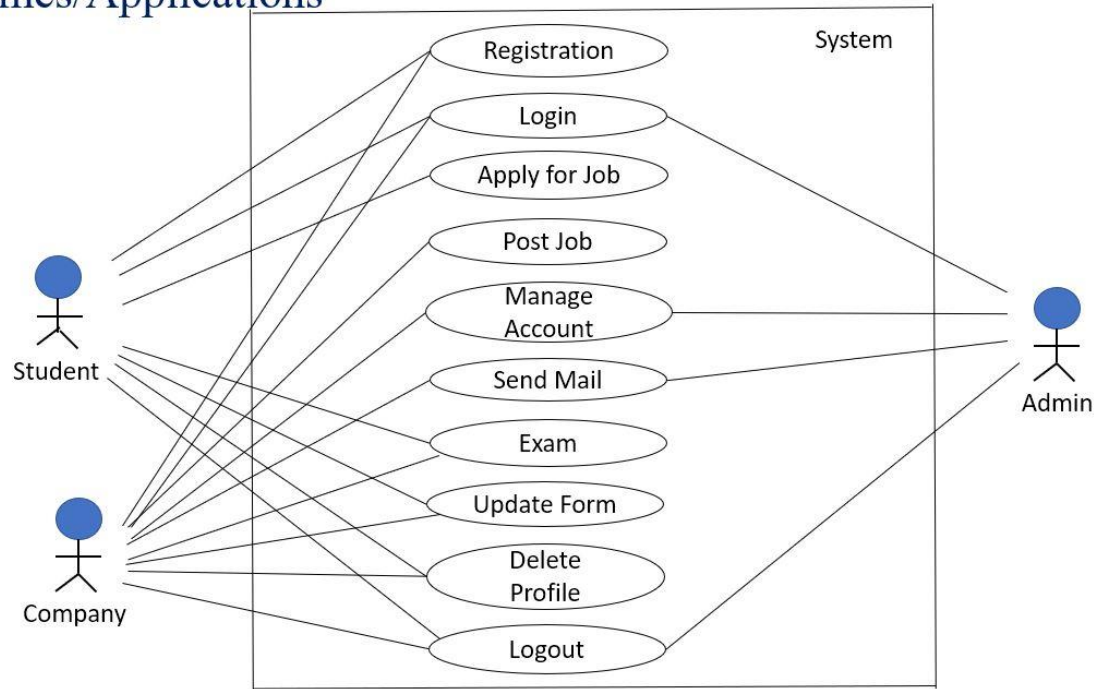

Figure 2: outcome chart

**SOFTWARE & HARDWARE SPECIFICATION**

The above system uses MERN stack application for both web and android

- Database - Mongo
- Framework – Express js
- Back-end - Node js
- Front-end - HTML, CSS, Bootstrap, React
- Encryption - cloud with Block stack
- Chatbot – NLP and Multinomial Naive Bayes algorithm

Figure 3: Technology stack

## 8 Customer Evaluation Report

- Campus Interaction System is totally informative and interactive learning system. This system is establishing cost-effectiveness of the proposed system for WCE students. In today's situation where all activities are done virtually, there is great need of Online facilities for students.
- Thus, the benefit of this project in the current scenario makes it economically more feasible. It has a scope for profit after the successful completion of the Project.
- The organization will be able to gain more advantages such as savings in operation cost, reduction in paperwork, better utilization of study resources.
- Our system required long term costs which included running costs for the system including update of software, stationary charge, registration charges etc.

## 9 Conclusions and Future Work

### Conclusions:

- ☐ Manages the information of respective Company Placement of College
- ☐ Provides all the technical study material before appearing to the respective interview rounds to students.
- ☐ Provides login for admin and student.
- ☐ Get instant placement reports, analytics reports.
- ☐ It tracks all information of Placement and students for practicing questions.
- ☐ support help by Frequently asked questions.

### Future Work:

- Here in the proposed system, almost whole work goes manually in the present placement system which makes it take time to avail changes. This includes main problems like searching for the data of students and sorting them along with it. Also, updating student data is a cumbersome job and does not have a method to notify the student in time which makes the management of placements very difficult. In the proposed system, all of these problems become automated.
- In the future as an extension to this project, the proposed system is helpful for all students in technical as well as non-technical point of view by adding more practice according to each branch.
- Live chatbot can be helpful for taking online interviews by either text format or by voice format.
- Notification banner or a mini calendar can be added to index page for getting updated information from college regarding campus or any activity for the same.
